

Application Note

Principles and Applications of the Selective Radiation Meter SRM-3000

With the SRM-3000, Narda Safety Test Solutions has brought out a modern, frequency-selective electromagnetic field test set that is easy to handle and straightforward to operate. Nevertheless, there are some situations where you will need to fully understand the internal workings of the device in order to perform the measurement task correctly or to be able to interpret the results properly. We have compiled an Application Note to help you with this. It outlines the mathematical principles of classical spectrum analysis, and uses this information to describe the special features of the SRM-3000. We will be pleased to send you a copy of this comprehensive 27-page document as a PDF file on request.

Just send an e-mail with your name and company address and “AN Principles and Applications of the SRM” in the subject line to: support@narda-sts.de and we'll do the rest.
